Crypto Arbitrage Bots

- **Cryptohopper**. An advanced cloud-based platform with copy-trade features, Cryptohopper supports crypto arbitrage trading as well as other strategies like market-making and auto-trading. Strategy design and backtesting tools are also available on the platform.
- **3Commas**. A well-respected provider with lots of well-written Trustpilot reviews, the 3Commas platform offers a trading terminal integrated with trailing take-profit and stop-loss functionality, as well as step-selling.
- **HaasOnline** (aka HaasBot). One of the most advanced tools to develop, backtest, and deploy arbitrage bots or other types of crypto trading bots. Available now as a trade server or as a cloud instance. One of HaasOnline's great advantages is the number of supported exchanges, over 22, including Binance , Kraken , Bitfinex , Bitstamp , and FTX.
- **Shrimpy** Well-known in the community for portfolio management, Shrimpy also offers social and automated trading, as well as portfolio rebalancing tools and backtesting tools to run strategies by. A helpful blog and lots of scripts for crypto arbitrage trading through their API are the cherries on the top.

Free crypto arbitrage bots (on GitHub)

- **Blackbird** – a bitcoin-exclusive arbitrage bot.
- **Catalyst Enigma** – a customizable Python bot with a supporting dashboard.
- **ZenBot** – an open-source platform with a number of premade strategies, supporting several exchanges.
